

Its time to think about the elderly...

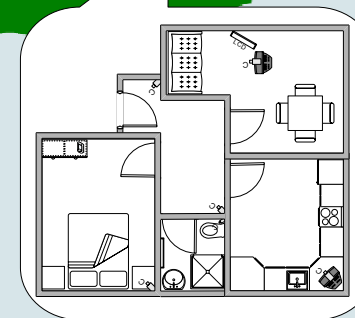

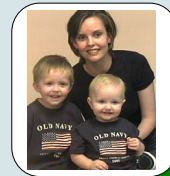

The Problem

- 40% of People over the age of 75 live alone
- Many have mobility problems and find it hard to socialise
- Often families live a long way away and are busy with other commitments
- Current technology can be hard to use for elderly people

- The elderly person's house is equipped with a display, server, and video/audio equipment.
- Using the installed displays, users can communicate via a direct connection.

- The elderly person's server can connect to another server, such as the elderly person's family, through a high-speed internet connection.
- The internet connection is secured by 'Secure Socket Layer' technology.

The Solution

- Fast Video and Audio Streaming allows you to interact with friends and family all over the world with a room in room experience!
- Why loose sleep worrying when you can be alerted to any problem they have by a simple command to our web services from your loved one.
- A specially tailored agenda management system to help organise your time. Such as shopping list and medical organisation.
- Chat with friends and family where ever you are play games, have family meals, watch movies... the possibilities are endless!
- Why loose sleep worrying when you can be alerted to any problem they have by a simple command to our web services from your loved one.
